## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. **Claims 1-18 and 22** drawn to a method of quantifying a color in a sample; a computer program; and a machine vision system classified in class 356, subclass 402.
  - II. **Claims 19-21 and 23**, drawn to a method of determining cell ratio in a biological sample, classified in class 356, subclass 39.
2. **Inventions I (claims 1-17 and 22) and II** are related as subcombination and combination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the method does not need the particular vector and matrix defining steps of the subcombination. The subcombination has separate utility such as in the inspection of paints.
3. **Inventions II and I (claim 18)** are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process can be practiced in a flow cytometer.

Art Unit: 2877

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
